<class 'pandas.core.frame.DataFrame'>

Explain Summary

We have a dataframe consisting of 9827 rows and 9 columns.

Our dataset looks bit tidy with no NaNs nor duplicated values.

Release_Date column needs to be casted into datetime and to extract only the year value.

Overview, Original_language and poster-url wouldn't be so useful during analysis, so we'll drop them.

There are noticeable outliers in Popularity column.

Vote Average better be categorised for proper analysis.

Genre column has comma separated values and white spaces that need to be handled and casted into category.
